

Product Details:

Concentrated Liquid Ionic Trace Mineral Drop Complex offers in 1/2 teaspoon, the mineral content of 1/2 cup sea water with 99.5% of the sodium removed. This product was specifically designed to contain a minimal amount of sodium. Most Americans eat an unnaturally large amount of sodium, of which only 5% comes naturally in the foods we eat. It has been estimated that most Americans consume twice as much sodium as potassium, while an ideal diet should consist of 5 times more potassium than sodium. A low potassium, high sodium diet has been demonstrated to play a role in the development of cardiovascular disease and cancer. Whereas, a diet more balanced has been shown to protect against the very same diseases.

Clinical Indications:

This product is intended to be a comprehensive mineral and electrolyte supplement.

Formulation:

Concentrated Trace Mineral Drop Complex offers the versatility of an electrolyte replacement drink, while nourishing the body with a complete blend of essential minerals. The body is constantly working to stay in a state of balance. This product helps you take a step in that direction. Concentrated Trace Mineral Drop Complex also provides the balance that your body needs.

Potassium, sodium and chloride are all considered electrolytes. They function in the maintenance and distribution of water within the body. In addition, they serve the role of controlling acid-base balance, heart contractility, kidney and adrenal function and vital neuromuscular activity.

We feel that minerals do not occur alone in food, therefore it would be unnatural to include some minerals in a product without providing a full complement of essential minerals.

Supplement Facts

Serving Size 1/2 teaspoon (abt. 40 drops)
Servings Per Container 96

Amount Per Serving		% DV
Magnesium	250 mg	63%
Chloride	700 mg	21%
Sodium	10 mg	0%
Potassium	5 mg	0%
Sulfate	55 mg	†
